

Málková Veronika
My evaluation,

I have a high school in social care and I was on the practice in home for seniors. Here is better of idea, because this institution aren't similar hospital and it is for old people very important.

The people living in flats, they have pets and can live as they wish.

But in Czech republic are a nice home for seniors, but are similar hospital, little. And not everywhere the people can have pets or their furniture.

I really liked a work team A, because my colleagues were perfect. They are nice to people and can help. I liked working with them. Surprised me, because sometimes said Czech words. It was nice!

But I had two problems and it communication, I feel very bad, that I don't understand to clients and I don't like work with biological material unglued.

Practice in the Netherlands was very beautiful for me. A work with old people is nice and I like it. I feel good, when I can help someone.

Bardová Monika
My evaluation,

I'm in the Czech Republic go to the practice of internal departments. Work on the cardiac ward was new to me. It's a different work. The internal departments are old people. In cardiology, people young and old. Cardiology is a specialized department. Work on cardiology was very interesting. I saw a lot of new things and processes. In my hospital we don't have a new mobile computer. Work with them is very interesting for me. It's a good thing for the nurses and doctor, because them can look at information about patients any time. In our hospital we have a different method of drug administration. Your method is good. In our hospital we don't have drapery at bed. Drapery is very good, because patients have privacy in room. In Holland hospital not good that nurses used very little gloves and pick-up telephone Nera bed with patients.

Working in a team was good. They were nice, friendly. Nurses and doctors give me information about work on cardiology. In Holland is different relation nurses and doctors. In Czech Republic nurses and doctors don't have good relation. Work on cardiology was very good.

I had a good mentor. Aafje was very friendly. Give me information about work on

cardiology, patients, medications, intervention. I was in school with Aafje. I saw and trained application infusion. I was in Aafje house. I saw your beautiful dogs, boyfriend and friends. Aafje show me hospital and small operating room. I saw application defibrillators and catheterization heart. It was very interesting. I know that my English was not good. I had problem with communication. I was happy, because on cardiology had google translation on new mobile computer. I think my English has improved. I liked working at the hospital.

Sabina
My evaluation,

In my work I feel very good. Everybody was friendly and they help me with everything. Judith always told me what I will do this day. Sometimes I don't understand because I have small problem with my English, but she always repeats it to me and then I understand. She said me everything slowly. It was very good for me. I had only one problem this is communication with old people. It wasn't good because old people need communication with someone, because they like say what they doing all day. My contents in work was for example: help with washing and eating and sometimes I go out with clients. I like that they have few time for clients, because in The Czech republic are everybody very hurried. They listen to clients and trying to help him. Here is very nice care about client. I like, that clients can have their furniture and clients live in a flat, because they feels like home. For staff they have good thing it is lift for lifting people. This is very nice for their back. Only one thing surprised me, how little staff use gloves, because it isn't good for their health. One day I was in Jasmine where they doing ergotherapy. It's very nice place for clients, because they relaxing and doing something. I hope that I was good worker and thank for this internship and thank you so much, Judith, for caring about me.

Bedankt voor alles
